

...advanced technology  
to stop corrosion

### Diagram of typical MINITEK ICCP System

### ALUTEK SYSTEMS FOR ALUMINIUM HULL CORROSION PROTECTION

The Alutek ICCP system provides carefully monitored corrosion protection for aluminium hulled craft. It has the advantages of a compact power unit and lightweight, flush mounted anodes which do not impair the speed of the yacht or detract from its appearance.

### JETTEK SYSTEMS FOR WATERJET CORROSION PROTECTION

Waterjet propulsion units are being increasingly used on luxury yachts. With their extensive experience in the commercial field, Corrintec can provide ICCP systems which combine many advantages in comparison with sacrificial systems in terms of effectiveness, reliability and weight reduction.

### CATHELCO PIPEWORK ANTI-FOULING SYSTEMS FOR LUXURY YACHTS

As world leaders in marine pipework anti-fouling equipment, Cathelco provide a range of systems to prevent the growth of barnacles and mussels in seawater lines. Easy to install and proven for their efficiency, the systems have compact control panels and miniature anodes - specifically developed for luxury yachts.

ADVANCED HULL PROTECTION  
SYSTEMS FOR LEISURE CRAFT

The Minitek system has been specifically designed to provide effective and economical hull corrosion protection for luxury yachts.

As an impressed current cathodic protection (ICCP) system it has many advantages in comparison with the use of traditional sacrificial anodes. There is no need to change the Minitek anodes at each dry docking, so maintenance costs are significantly reduced.

Also, in operation, Minitek automatically adjusts the level of output to the anodes resulting in continuous, precisely controlled protection at all times.

Minitek offers superior protection at an affordable price, whilst eliminating corrosion and on-going maintenance costs.

- Compact, lightweight design for easy installation in confined spaces.
- Virtually no maintenance required.
- Assured protection against bi-metallic corrosion.
- Microprocessor operated and controlled.
- Automatically performs self diagnostic tests and displays outcome for alarms, module status, over protection, under protection, electrode, anode and current/voltage status.
- Simultaneously displays output and reference status.

- Control panel measures only 500mm x 390mm x 210mm for systems up to 40 amps.
- The system is available in 10amp, 20amp and 40amp designs.
- Supplied with a flush mounted platinised titanium/MMO anode and a silver/silver chloride or zinc reference electrode.
- Can be supplied with up to 4 reference electrodes.
- Optional multiple control panels for precision sector control.

### FAX BACK FOR FURTHER INFORMATION

If you would like further information about the Minitek System, please complete this form and fax it back to Corrintec on **+44 (0)1246 206519**
